

How to Choose Office Security Systems to Protect Your Business & Assets

When searching for a **office security system**, there are several factors to take into consideration.

Your **surveillance system** can be either hardwired or a [wireless security system](#). Typically a hard-wired DVR package uses coaxial cable to connect the [security camera](#) directly to the [digital video recorder](#). These systems are typically less expensive than their wireless counterparts but require more installation effort.

A [wireless security system](#) uses [ip cameras](#) that connect to a [wireless security network](#) the same way a laptop or other wireless device connects to the Internet. The [wireless cameras](#) send the camera signal to the [network video recorder](#) that in turn records the activity in a high resolution MPEG 4 format.

We carry both [wireless security systems](#) as well as **CCTV security camera systems**. We can create a custom system to meet your exact specifications or you can buy one of our **complete security system packages** at a reasonable price.
