- E-mail Event Alert, IP Address Dispatch (for use with dynamic IP)
- Control of multi-systems from a remote location (DVR-Net)
- Support for Internet Explorer ActiveX remote monitoring, Android and iPhone
- 1 Yr. Limited Manufacturer Warranty

Previously, camera manipulation and data storing/searching were possible only on the DVR installed computer. This meant that a person must physically present in front of the specific computer for even minor administration such as checking the current status of the system. This has become a big hassle for those who must overlook many DVR systems. To overcome these difficulties, DVR Net has been introduced. With DVR Net, you can now enjoy all the functions of a DVR system anytime, any remote location by connecting to the main server computer over modem, LAN, or Internet. The functions include checking the system status, searching the stored data, and even changing the user settings and the recording schedule. The ability to be able to perform total control from any place any time is what DVR Net makes by introducing Network Security Program for the next generation.

Support TCP/IP

Support communication protocol to log in the DVR.

Real-time Monitoring of DVR motion pictures

Log in DVR Net and monitor all the DVR system images in real time.

Flexible relocation of displayed channels

Displayed channel can be moved to desired location of the screen by simple drag and drop.

Searching and Recording DVR data

Various feature for Search and Recording, and even bring data to save it on the local computer.

Audio Search

Recorded audio data can be retrieved DVR Net software.

Two-way Voice Communications

DVR Net provides voice communication capabilities with the DVR system.

PAN/TILT/ZOOM/FOCUS remote control

PTZ Controls can be attained by manipulating DVR Net program.

Manipulate DVR Settings

Ability to change settings of the DVR system from DVR Net, such as enable / disable of cameras, change recording schedule, and change setting of sensors.

Remote Notify function (Automatically message alert sent from the DVR)

When the DVR System detects motion or sensor trigger, it notifies its event and automatically turns on DVR Net (while DVR Net is minimized). Also can be verified from event viewer.

Analyzing Event Log

DVR Net can receive and record events notified from the DVR System, and the event viewer will directly connect to the DVR System to retrieve data.

- Protech CAP, LIVCAP, ACAP, MPG, and MPGAMX are all supported.
